1. Write a program for Armstrong Numbers

```
using System;
namespace TestConsoleApp{
public class Armstrong
{
    public static void
Main(string[] args)
    {
        Console.WriteLine("A program to check the given number is
Armstrong Number or not");
        int n, m, num, d;
        double result = 0, number;

        Console.WriteLine("Enter the number of iterations:
");
        n = int.Parse(Console.ReadLine());
        for (m = 0; m < n; m++)
        {
            Console.WriteLine("Enter the number of digits:
");
            d = int.Parse(Console.ReadLine());
            Console.WriteLine("Enter the number: ");
            num =
            int.Parse(Console.ReadLine());
            number = num;
            for (int i = 0; i < d; i++)
            {
                int rem = num % 10; //split
                double power =
                Math.Pow(rem, d); //Console.WriteLine(power);
                result = result + power;
                num = num / 10;
            }
            if
            (number == result)
            {
                Console.WriteLine(number + " Armstrong number.");
            }
            else
            {
                Console.WriteLine(number + " NOT an Armstrong number");
            }
            Console.ReadLine();
        }
    }
}
```

The screenshot shows the Visual Studio Code interface with the following components:

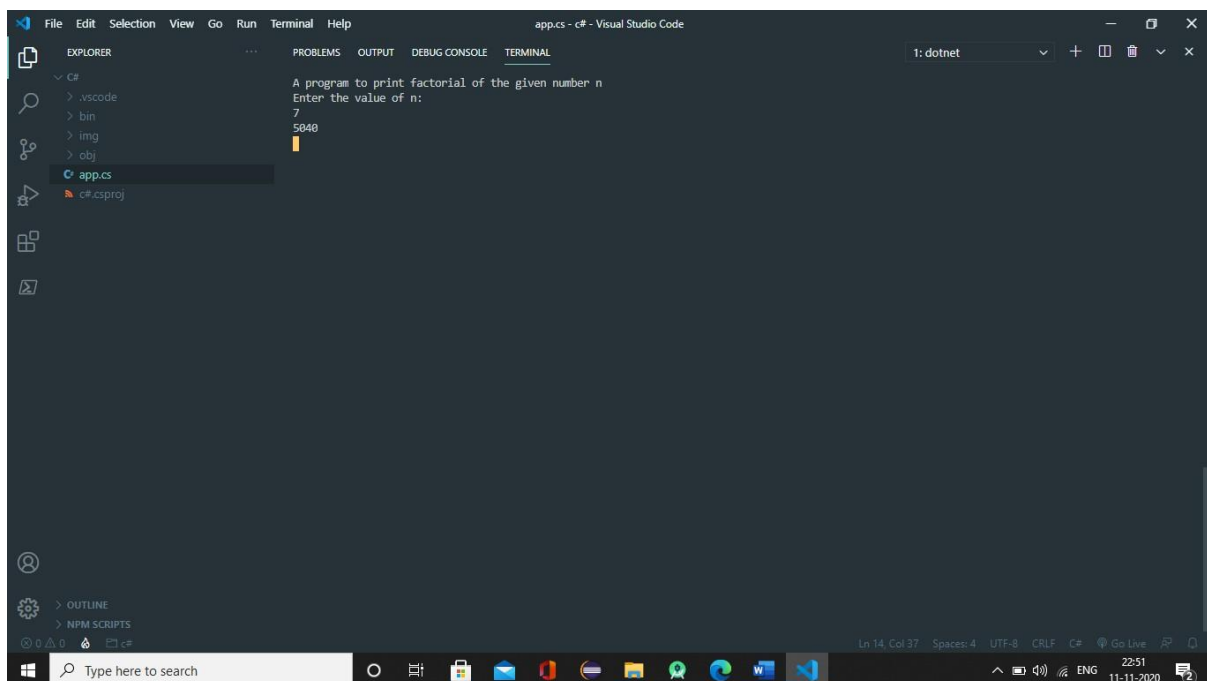

- Explorer:** Displays the file structure with folders `.vscode`, `bin`, `img`, `obj`, and files `app.cs` and `c#.csproj`.
- Terminal:** Shows the command prompt output for running the program.

```
PS C:\Users\harsh\OneDrive\Desktop\c#> dotnet run
A program to check the given number is Armstrong Number or not
Enter the number of iterations:
5
Enter the number of digits:
5
Enter the number:
23
23 NOT an Armstrong number
```
- Bottom Bar:** Includes a search bar, taskbar icons, and a status bar showing "Ln 43, Col 2 (1515 selected)", "Spaces: 4", "UTF-8", "CRLF", "C#", and "Go Live". The system clock shows 22:48 on 11-11-2020.

2. Write a program to print factorial of a number

```
using System;
namespace
TestConsoleApp{
    public class
    Factorial
    {
        public static void
    Main(string[] args)
    {
        Console.WriteLine("A program to print factorial of the given number n");
        int m, n, fact = 1;

        Console.WriteLine("Enter the value of n:");
        n = int.Parse(Console.ReadLine());
        for (m = 1; m <= n; m++)
        {
            fact = fact * m;
        }
        Console.WriteLine(fact);
        Console.ReadLine();
    }
}
```

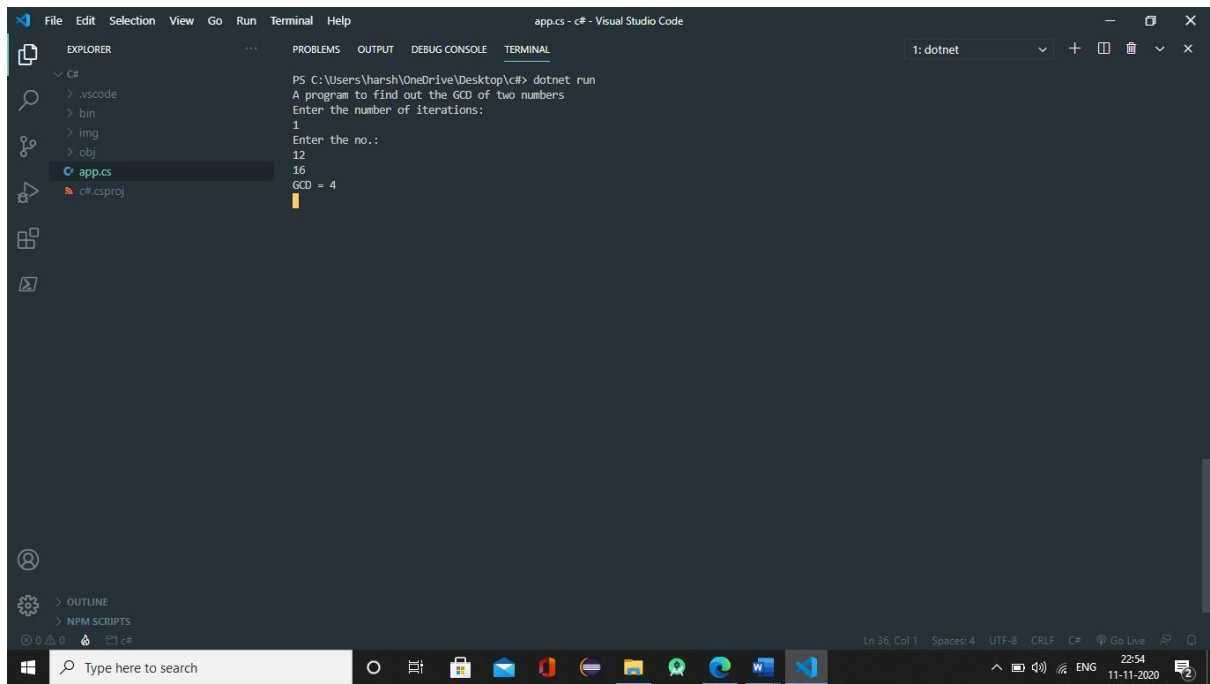

3. Write a program to find the GCD of two numbers

```

using System;
namespace
TestConsoleApp{
    public
    class GCD
    {
        public static void
Main(string[] args)
    {
        int n, a, b, gcd = 1, temp;
        Console.WriteLine("A program to find out the GCD of two
numbers");
        Console.WriteLine("Enter the number of iterations: ");
n = int.Parse(Console.ReadLine());
        for (int i = 0; i < n; i++)
        {
            Console.WriteLine("Enter the no.:");
a = int.Parse(Console.ReadLine());
            b
= int.Parse(Console.ReadLine());
            for(int z = 1; z<=a && z <= b;
z++)
            {
                if (a%z==0 && b%z==0)
gcd = z;
            }
        while (b != 0)
        {
            temp = b;
            b = a % b;
            a = temp;
        }
gcd = a;
        Console.WriteLine("GCD = " + gcd);
        Console.ReadLine();
    }
}
}

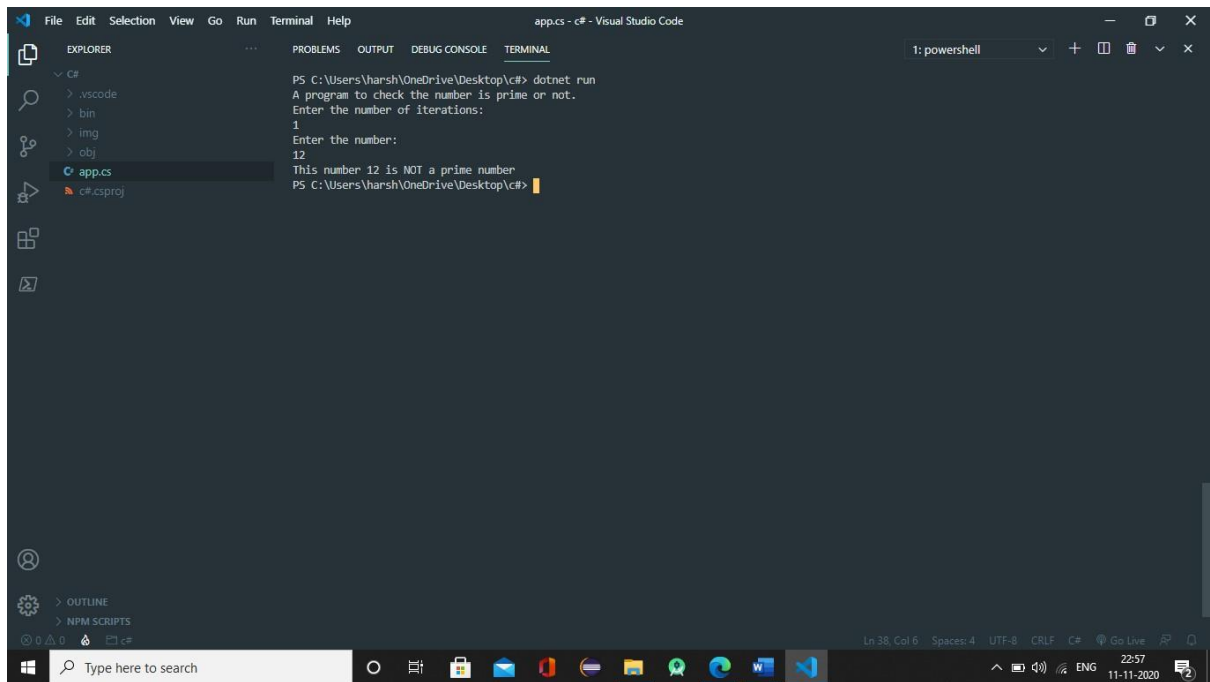

```

4. Write a program to check if a number is prime number

```
using System;
namespace
TestConsoleApp{
public class Prime
{
    public static void
Main(string[] args)
    {
        Console.WriteLine("A program to check the number is prime or not."
);
        int m, n, count = 0,
i, j;

        Console.WriteLine("Enter the number of iterations: ");
j = int.Parse(Console.ReadLine());
        for (i = 0; i < j;
i++)
        {
            Console.WriteLine("Enter the number: ");
n = int.Parse(Console.ReadLine());
            for (m = 2; m <= n / 2;
m++)
            {
                if (n % m == 0)
                {
                    count = count + 1;
                }
            }
            if (count == 0)
            {
                Console.WriteLine("This number " + n + " is a prime number
");
            }
            else
            {
                Console.WriteLine("This number " + n + " is NOT a prime nu
mber");
                count = 0;
            }
        }
    }
}
```

5. Write a program to print the fibonacci series

```
using System;
namespace
TestConsoleApp{
public class Prime
{
    public class
Fibonacci
    {
        public static void
Main(string[] args)
        {
            Console.WriteLine("A program to print fibonacci series of n terms");
            int m, n, a = 0, b = 1;

            Console.WriteLine("Enter the value: ");
            n = int.Parse(Console.ReadLine());
            Console.WriteLine("Fibonacci Series: ");
            for (m = 1; m <= n; m++)
            {
                Console.WriteLine(a);
                int next = a + b;
                a = b;
                b = next;
            }
        }
    }
}
```

6. Write a program to print the half pyramid pattern

```
using System;
namespace TestConsoleApp{
public class Pattern_HalfPyramid
{
    public static void
Main(string[] args)
    {
        int space, rows;
        Console.WriteLine("A program to print half pyramid
pattern");
        Console.WriteLine("Enter the number of rows:");
        rows = int.Parse(Console.ReadLine());
        for (int i = 0; i <= rows;
i++)
        {
            for (int star = 0; star < i; star++)
            {
                Console.Write("*");
            }
            for (space = i;
space < rows; space++)
            {
                Console.Write(" ");
            }
            Console.WriteLine();
            Console.ReadLine();
        }
    }
}
```

7. Write a program to print the half pyramid pattern with numbers

```
using System;
namespace TestConsoleApp{    public
class Pattern_HalfPyramidNum
    {        public static void
Main(string[] args)
    {
        int space, rows;
        Console.WriteLine("A program to print half pyramid pattern of
numbers:");
        Console.WriteLine("Enter the number of rows:");
        rows = int.Parse(Console.ReadLine());
        Console.WriteLine();
        for (int i = 1; i <= rows;
i++)
        {
            for (int num = 1; num <= i;
num++)
            {
                Console.Write(num);
            }
            for (space = i;
space < rows; space++)
            {
                Console.Write(" ");
            }
            Console.WriteLine();
            Console.ReadLine();
        }
    }
}
```

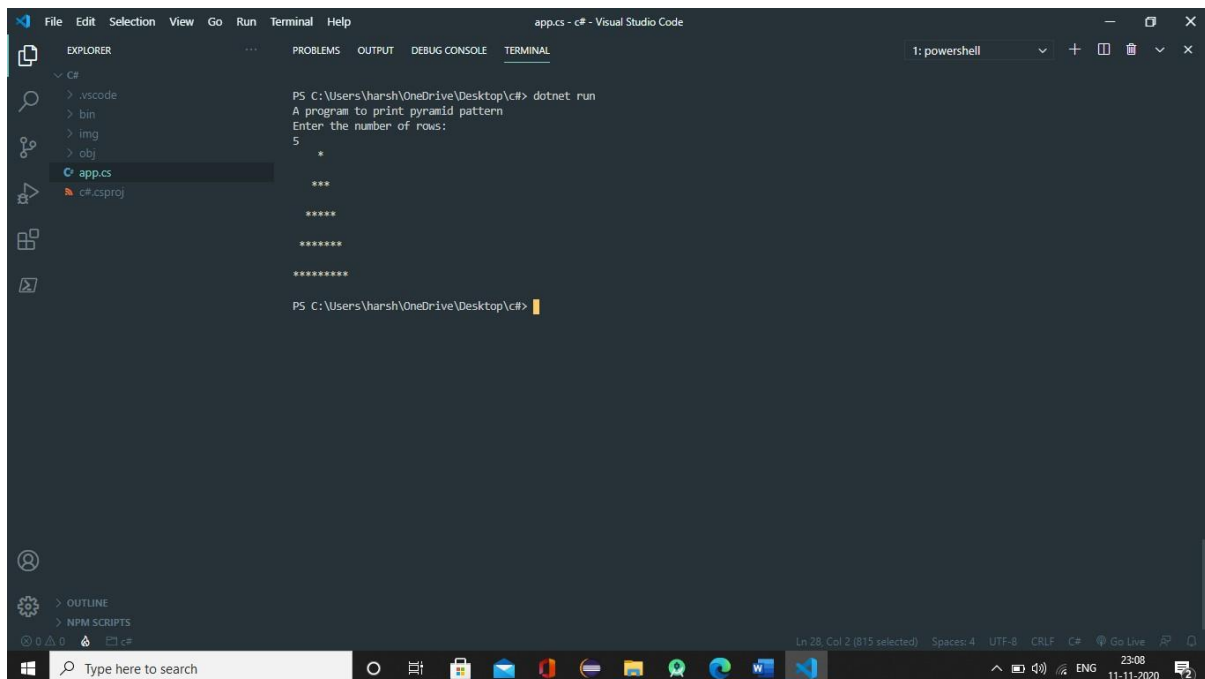

8. Write a program to print the half pyramid inverse pattern

```
using System;
namespace TestConsoleApp{    public
class Pattern_HalfInversePyramid
    {        public static void
Main(string[] args)
    {
        int space, rows;
        Console.WriteLine("A program to print half pyramid inverse
pattern ");
        Console.WriteLine("Enter the number of rows:");
        rows = int.Parse(Console.ReadLine());
        Console.WriteLine();
        for (int i = 0; i <= rows;
i++)
        {
            for (int star = rows; star > i; star--
)
            {
                Console.Write("*");
            }
            for (space = i;
space < rows; space++)
            {
                Console.Write(" ");
            }
            Console.WriteLine();
            Console.ReadLine();
        }
    }
}
```

9. Write a program to print the pyramid pattern

```
using System;
namespace
TestConsoleApp{
    public class Pattern_pyramid
    {
        public static void
Main(string[] args)
        {
            int space, rows;
            Console.WriteLine("A program to print pyramid pattern");
            Console.WriteLine("Enter the number of
rows:");
            rows = int.Parse(Console.ReadLine());
            for (int i = 1; i <= rows; i++)
            {
                for (space = i; space <
rows; space++)
                {
                    Console.Write(" ");
                }
                for (int star = 1; star

11. Write a program to print the diamond pattern

```
using System;
namespace TestConsoleApp{
public class Pattern_diamond
    {
        public static void
Main(string[] args)
    {
        int rows,
i, j, space;

        Console.Write("Enter the number of rows: ");
rows = int.Parse(Console.ReadLine());
        for (i = 0; i <= rows / 2;
i++)
        {
            for (space = i; space <
rows / 2; space++)
            {
                Console.Write(" ");
            }
            for (j =
0; j <= i * 2; j++)
            {
                Console.Write("*");
            }
            Console.WriteLine();
        }
        for (i = rows / 2 +
1; i >= 1; i--)
        {
            for (space = i; space <= rows /
2 + 1; space++)
            {
                Console.Write(" ");
            }
            for (j = i * 2 - 4; j >= 0; j--)
            {
                Console.Write("*");
            }
            Console.WriteLine();
            Console.ReadLine();
        }
    }
}
```

12. Write a program to print the Pascal's triangle

```
using System;
namespace
TestConsoleApp{
    public class Pascal_Triangle
    {
        public static int
Factorial(int fact)
        {
            int m, f = 1;
for (m = 1; m <= fact; m++)
        {
f = f * m;
        }
        return f;
    }
    public static int Ncr(int a, int
b)
    {
        return Factorial(a) / (Factorial(b) *
Factorial(a - b));
    }
    public static void Main(string[]
args)
    {
        int space, rows, c;
        Console.WriteLine("A program to print the Pascal
triangle.");
        Console.WriteLine("Enter the number of rows:");
        rows = int.Parse(Console.ReadLine());
        for (int i = 0; i <= rows;
i++)
        {
            for (space = i; space <
rows; space++)
            {
                Console.Write(" ");
            }
            for (int
j = 0; j <= i; j++)
            {
                c = Ncr(i, j);
                Console.Write(c + " ");
            }
            Console.WriteLine();
            Console.ReadLine();
        }
    }
}
```

The screenshot shows the Visual Studio Code interface with a C# project named 'c#_csproj' containing a file 'app.cs'. The terminal window is active, showing the execution of the program. The program prompts the user to enter the number of rows, and the user has entered '5'. The output is a Pascal triangle with 5 rows.

```
PS C:\Users\harsh\OneDrive\Desktop\c#> dotnet run
A program to print the Pascal triangle.
Enter the number of rows:
5
1
1 1
1 2 1
1 3 3 1
1 4 6 4 1
1 5 10 10 5 1
PS C:\Users\harsh\OneDrive\Desktop\c#>
```

The status bar at the bottom indicates the current line and column (Ln 45, Col 2), the number of spaces (4), the encoding (UTF-8), the line ending (CRLF), and the language (C#). The system tray shows the date and time (23:15, 11-11-2020).

13. Write a program to compare two string without using string library functions

```
using System;
namespace
TestConsoleApp
{
    class
    Program
    {
        public class
        StringCompare
        {
            public static void
            Main(string[] args)
            {
                string str1, str2; int flag = 0;
                Console.WriteLine("A program to compare two
strings.");
                Console.WriteLine("Enter string 1: ");
                str1 = Console.ReadLine();
                Console.WriteLine("Enter string 2: ");
                str2 = Console.ReadLine();
                for (int i = 0; i < str1.Length; i++)
                {
                    if
                    (str1[i] != str2[i])
                    {
                        flag = 0; break;
                    }
                    else
                    {
                        flag = 1;
                    }
                }

                if (flag == 0)
                {
                    Console.WriteLine(str1 + " and " + str2 + " are NOT equal"
);
                }
                else if (flag == 1)
                {
                    Console.WriteLine(str1 + " and " + str2 + " are Equal");
                }
            }
        }
    }
}
```

14. Write a program to count a total number of alphabets, digits and special characters in a string

```
using System;
namespace TestConsoleApp{
public class StringCount
{
    public static void
Main(string[] args)
    {
        string str;
int alpha = 0, digit = 0, sym = 0;

        Console.WriteLine("Enter the main string: ");
str = Console.ReadLine();
        foreach (char s in
str)
        {
            if (s >= 65 && s <= 90 || s >=
97 && s <= 122)
            {
alpha += 1;
            }
            else if
(s >= 48 && s <= 57)
            {
digit += 1;
            }
            else
            {
sym += 1;
            }
        }
        Console.WriteLine();
        Console.WriteLine("Number of Alphabets: " + alpha);
        Console.WriteLine("Number of Digits: " + digit);
        Console.WriteLine("Number of Special Characters: " + sym);
        Console.ReadLine();
    }
}
```

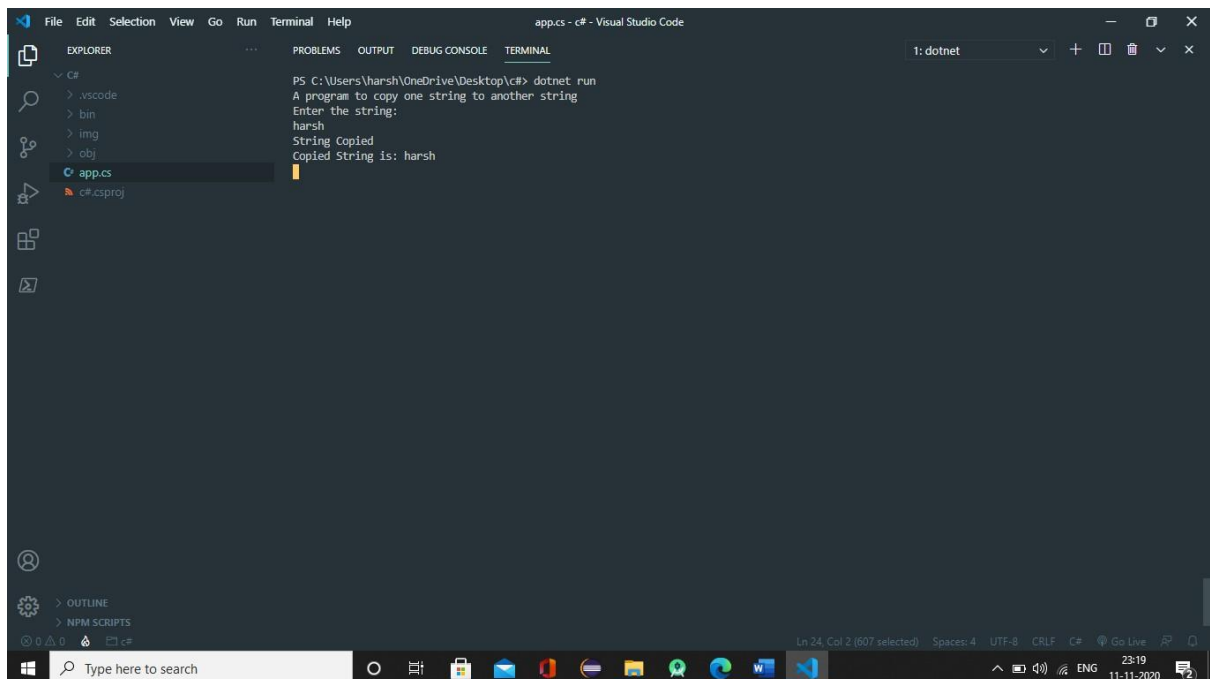

15. Write a program to copy one string to another string

```
using System;
namespace TestConsoleApp{
public class StringCopy
    {        public static void
Main(string[] args)
    {
        string
s1, s2 = "";

        Console.WriteLine("A program to copy one string to another string"
);

        Console.WriteLine("Enter the string: ");
s1 = Console.ReadLine();
        foreach (char a in
s1)
        {
s2 += a;
        }
        Console.WriteLine("String Copied");
        Console.WriteLine("Copied String is: " + s2);
        Console.ReadLine();
    }
}
```

16. Write a program to find maximum occurring character in a string

```
using System;
namespace TestConsoleApp{
public class StringMax
    {
        public static void
Main(string[] args)
    {
string str;
        int[] count = new int[256];
        Console.WriteLine("Enter the string: ");
str = Console.ReadLine();
        for (int i = 0; i < str.Length;
i++)
        {
count[str[i]]++;
        }
        int
max = -1;
        char
result = ' ';
        for (int i = 0; i < str.Length;
i++)
        {
            if (max <
count[str[i]])
            {
max = count[str[i]];
result = str[i];
            }
        }
        Console.WriteLine("Maximum occurring character in string: " +
result);
        Console.ReadLine();
    }
}
```

17. Write a program to check whether a given substring is present in the given string

```
using System;
namespace TestConsoleApp{
public class StringSubString
{
    public static void
Main(string[] args)
    {
        string str, substr;
        Console.WriteLine("A program to check whether a given substring
i s present in the given string.");
        Console.WriteLine("Enter the string: ");
str = Console.ReadLine();
        Console.WriteLine("Enter the Sub-string");
substr = Console.ReadLine();
        int flag = 0;
        for (int i = 0; i <=
str.Length - substr.Length; i++)
        {
            for (int j = i; j < i +
substr.Length; j++)
            {
                flag = 1;
if (str[j] != substr[j - i])
                {
flag = 0;
break;
                }
            }
        }
        if (flag ==
1)
            break;
        }
        if (flag ==
1)
        {
            Console.WriteLine("The substring is present in given String");
        }
        else
        {
            Console.WriteLine("The substring is NOT present in given
Strin g");
            Console.ReadLine();
        }
    }
}
```

18. Write a Program for Encapsulation

```
using System;
namespace
TestConsoleApp{
class Student
    {
        private int
roll;
        private
string name;
        public
int Roll
    {
        get
    {
        return
roll;
        }
    set
    {
roll = value;
        }
    }
    public string Name
    {
        get
    {
        return
name;
        }
    set
    {
name = value;
        }
    }
}

class Program
{
    static void
Main(string[] args)
    {
        Student A = new Student();
        A.Roll = 10;
        A.Name = "Manish Yadav";
        Console.WriteLine("Roll: " + A.Roll);
        Console.WriteLine("Name: " + A.Name);
        Console.ReadLine();
    }
}
```

19. Write a program for Abstraction

```
using System;
namespace TestConsoleApp{
public class Abstraction
{
    abstract
class Cs
    {
        public abstract
void Fun();
    }
    private class Good :
Cs
    {
        public override
void Fun()
        {
            Console.WriteLine("C# is Good");
        }
    }
    private class Best :
Cs
    {
        public override
void Fun()
        {
            Console.WriteLine("C# is Best");
        }
    }
    private class Better :
Cs
    {
        public override
void Fun()
        {
            Console.WriteLine("C# is Better");
        }
    }

    public class MyClass
    {
        public static
void Main()
        {
            Cs c;
c = new Good();
            c.Fun();
c = new Best();
            c.Fun();
c = new Better();
            c.Fun();
            Console.ReadLine();

        }
    }
}
```

```
}  
}  
}
```

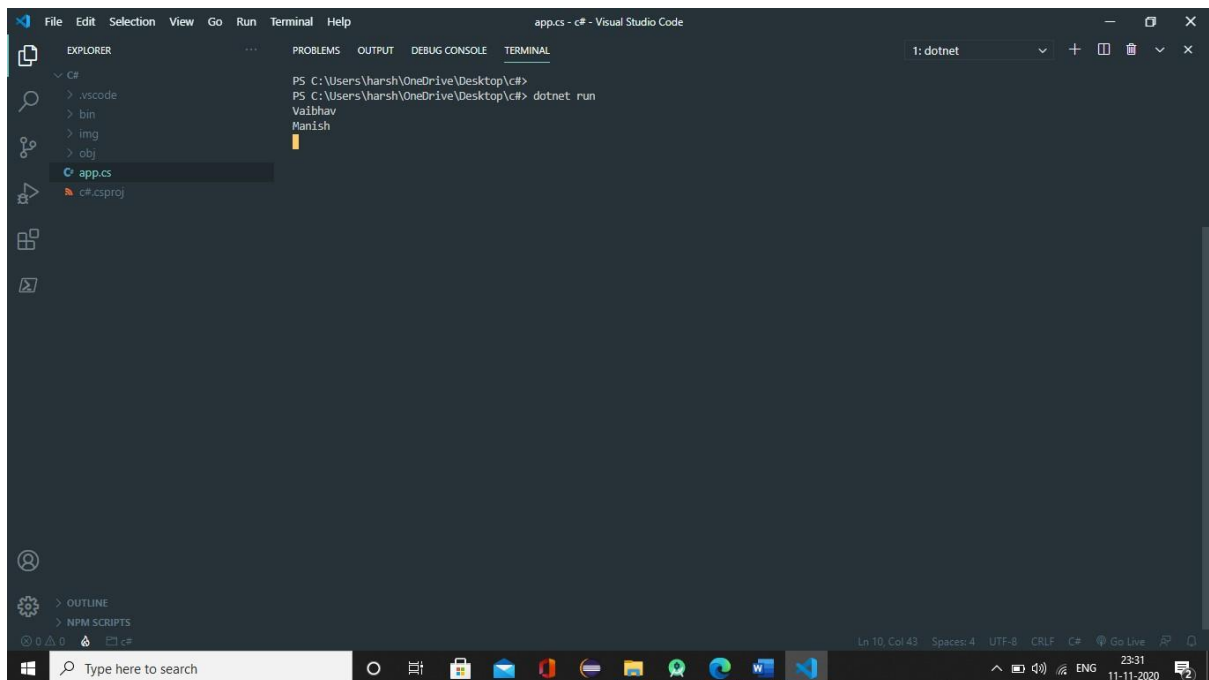

20. Write a program for single Inheritance

```

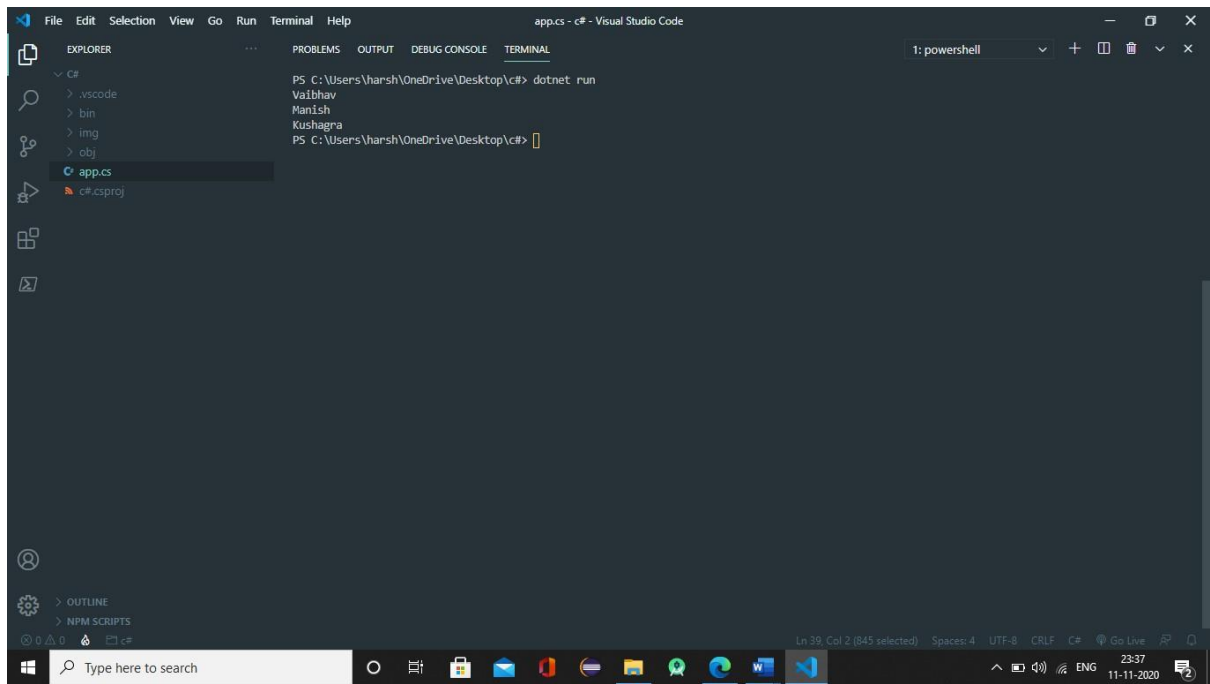

using System;
namespace TestConsoleApp{
public class Inheritance
    {
        class
MainClass
        {
            public
void Print()
        {
            Console.WriteLine("vaibhav");
        }
    }
class Subclass : MainClass
    {
void Print1()
    {
        Console.WriteLine("Manish");
    }
    static void
Main(string[] args)
    {
        Subclass s = new Subclass();
        s.Print();
        s.Print1();
        Console.ReadLine();
    }
    }
}
}

```

21. Write a program for Multilevel Inheritance

```
using System;
namespace
TestConsoleApp{
    public class MultiInheritance
    {
        class
MainClass
        {
            public
void Print()
            {
                Console.WriteLine("Vaibhav");
            }
        }
class Subclass : MainClass
        {
            public
void Print1()
            {
                Console.WriteLine("Manish");
            }
        }
        class Subclass2
: Subclass
        {
            public void
Print2()
            {
                Console.WriteLine("Kushagra");
            }
            static void
Main(string[] args)
            {
                Subclass2 s = new Subclass2();
                s.Print();
                s.Print1();
                s.Print2();
                // Console.ReadLine();
            }
        }
    }
}
```

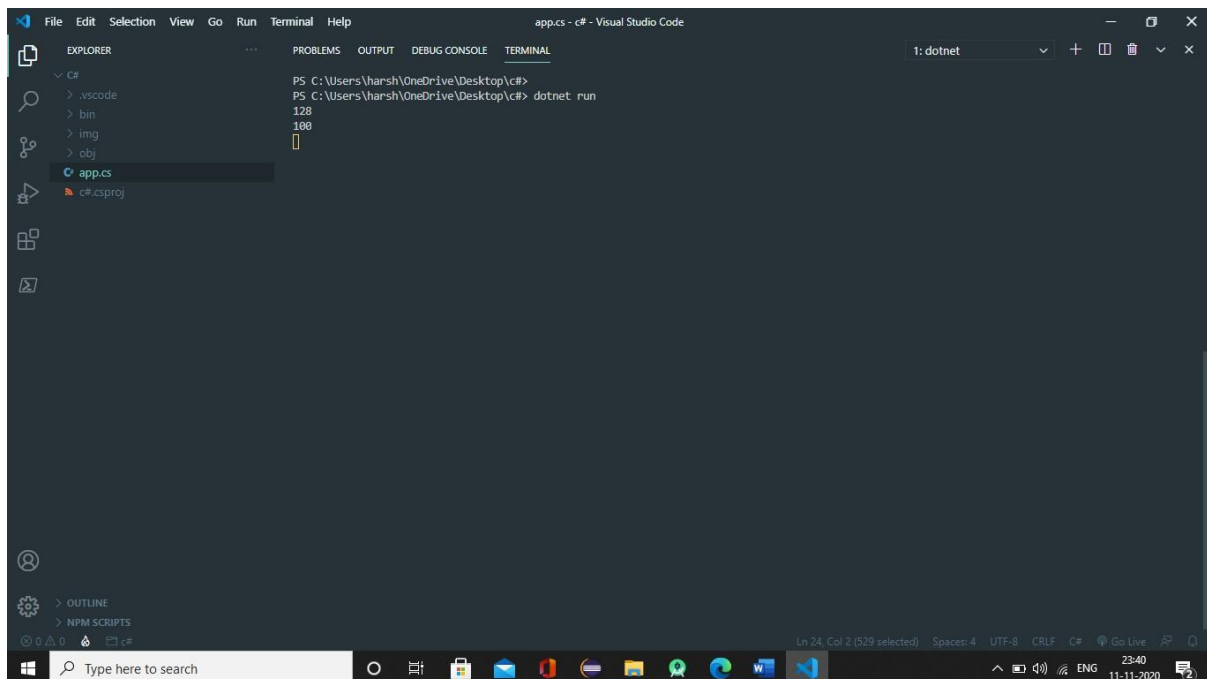

22. Write a program for multiple Inheritance

```
using System;
namespace TestConsoleApp{
public class MultipleInheritance
{
    class
MainClass
    {
        public
void Print()
    {
        Console.WriteLine("Vaibhav");
    }
}
interface MainClass1
{
void Print1();
}
    class Subclass : MainClass,
MainClass1
    {
void Print2()
    {
        Console.WriteLine("Manish");
    }
public void Print1()
    {
        Console.WriteLine("Kushagra");
    }
    static void
Main(string[] args)
    {
        Subclass s = new Subclass();
        s.Print();
        s.Print1();
        s.Print2();
        Console.ReadLine();
    }
}
}
```

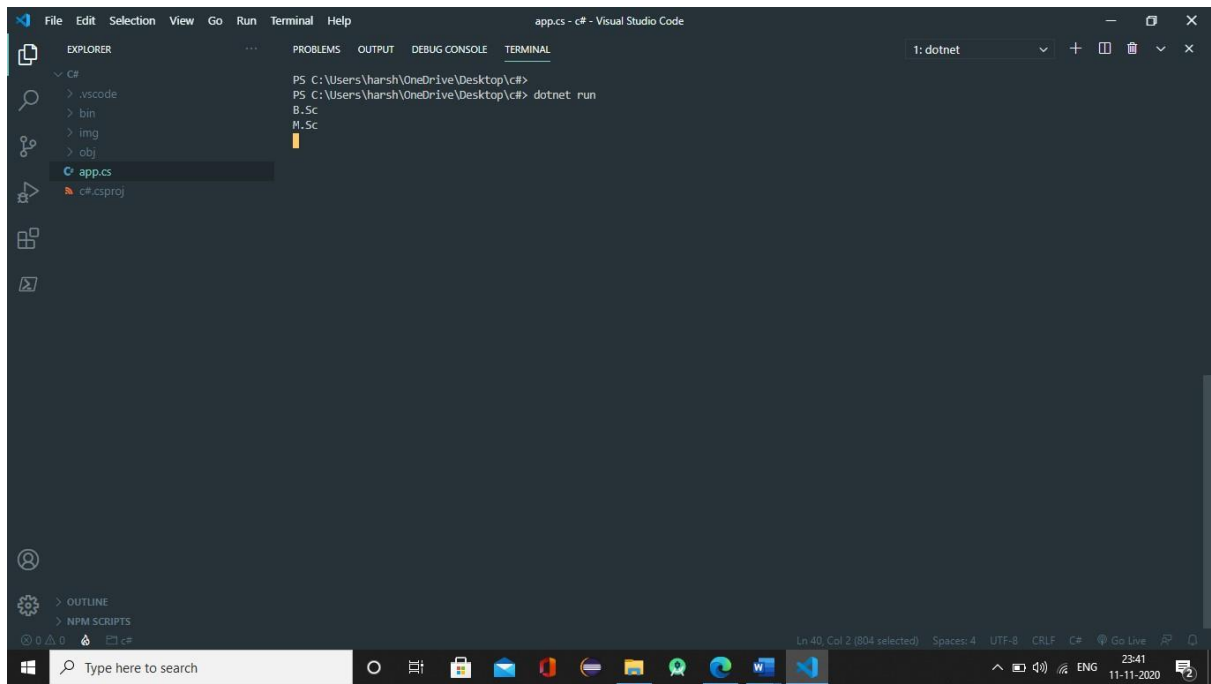

23. Write a program for method overloading

```
using
System;
namespace
TestConsoleApp{
    public class MethodOverloading
    {
        static int Sum(int a,
int b)
        {
return a + b;
        }
        static double Sum(double
a, double b)
        {
return a + b;
        }
        public static void
Main()
        {
            int sum1 =
Sum(54, 74);
            double sum2 = Sum(34.84, 65.16);
            Console.WriteLine(sum1);
            Console.WriteLine(sum2);
            Console.ReadLine();
        }
    }
}
```

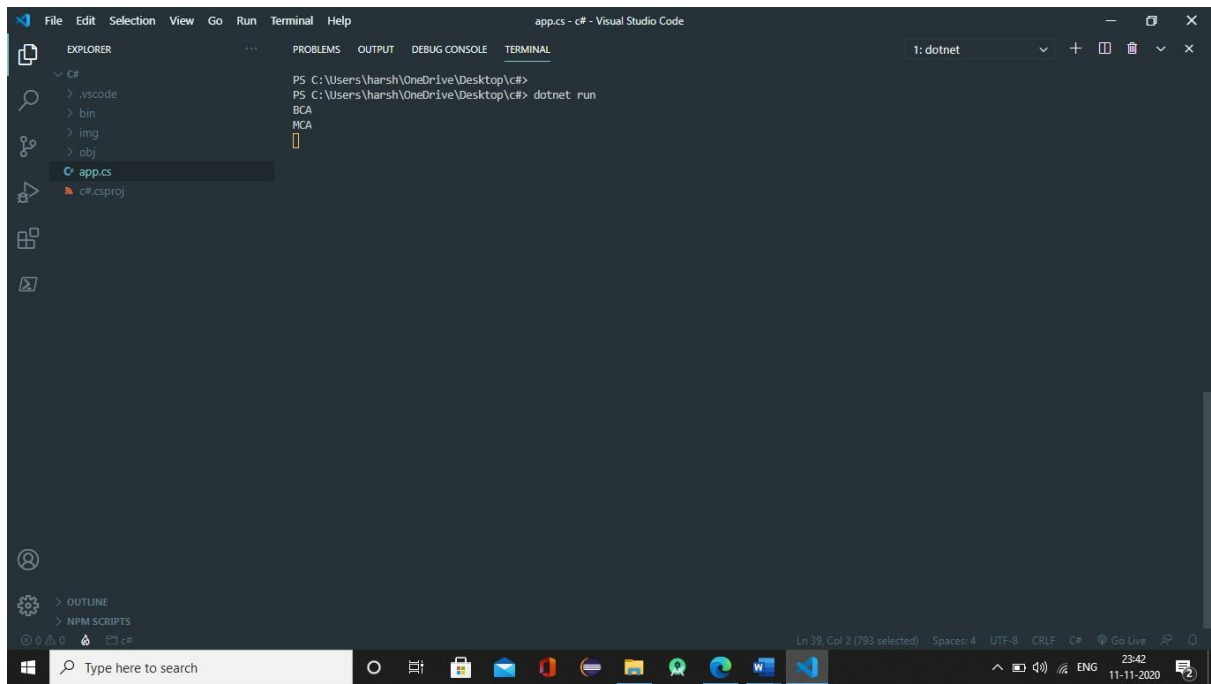

24. Write a program for method overriding

```
using System;
namespace
TestConsoleApp{
    public class MethodOverriding
    {
        public
class Cs
        {
            public virtual
void Fun()
        {
            Console.WriteLine("B.Sc");
        }
    }
    public class MCA :
Cs
        {
            public override
void Fun()
        {
            Console.WriteLine("M.Sc");
        }
    }
    private class BCA :
Cs
        {
            public override
void Fun()
        {
            Console.WriteLine("B.Sc");
        }
    }
    public static void
Main()
    {
        Cs c;
c = new BCA();
        c.Fun();
c = new MCA();
        c.Fun();
        Console.ReadLine();
    }
}
```

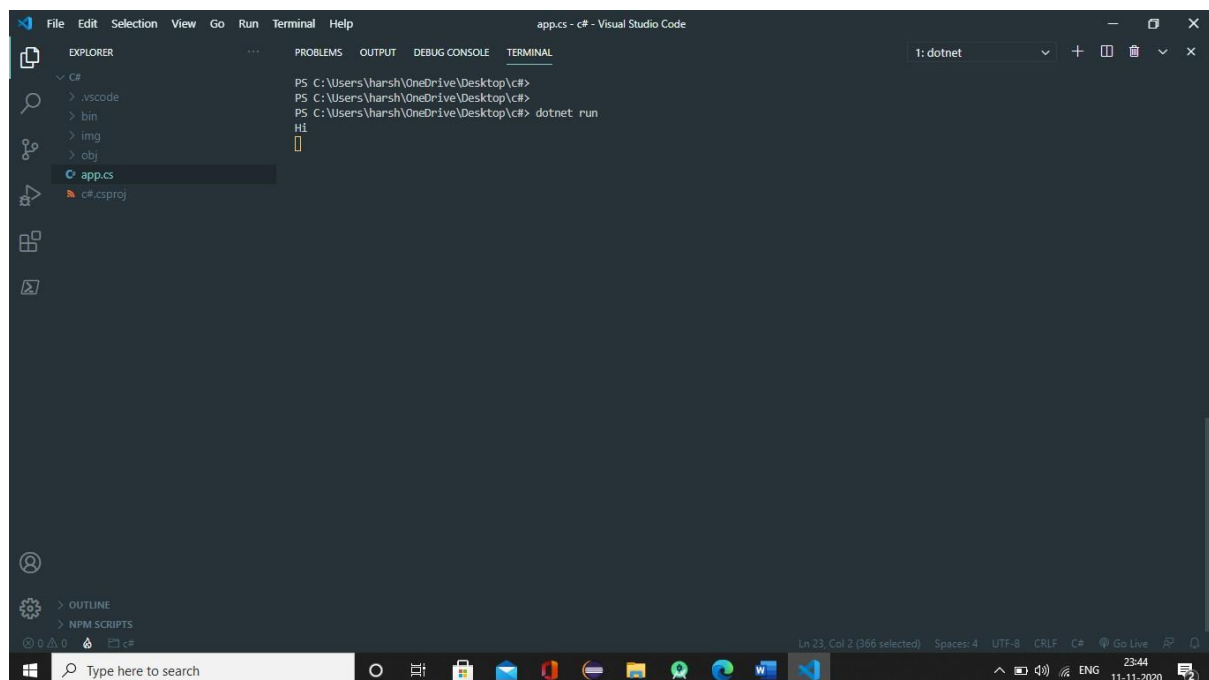

25. Write a program for Interface

```
using System;
namespace
TestConsoleApp{
public class Interface
{
    public
interface Cs
    {
void Fun();
    }
    private class Bca :
Cs
    {
        public
void Fun()
    {
        Console.WriteLine("BCA");
    }
}
private class Mca : Cs
    {
        public
void Fun()
    {
        Console.WriteLine("MCA");
    }
    }
    public class
MyClass
    {
        public static void
Main(string[] args)
        {
            Cs c;
c = new Bca();
            c.Fun();
c = new Mca();
            c.Fun();
            Console.ReadLine();
        }
    }
}
```

26. Write a program for Namespace

```
using System;
namespace TestConsoleApp{class
Program
{
    static void
Main(string[] args)
    {
        A.B test = new A.B();
test.C();
    }
}
namespace
A
{
    public
class B
    {
        public
void C()
    {
        Console.WriteLine("Hi");
        Console.ReadLine();
    }
}
}
```

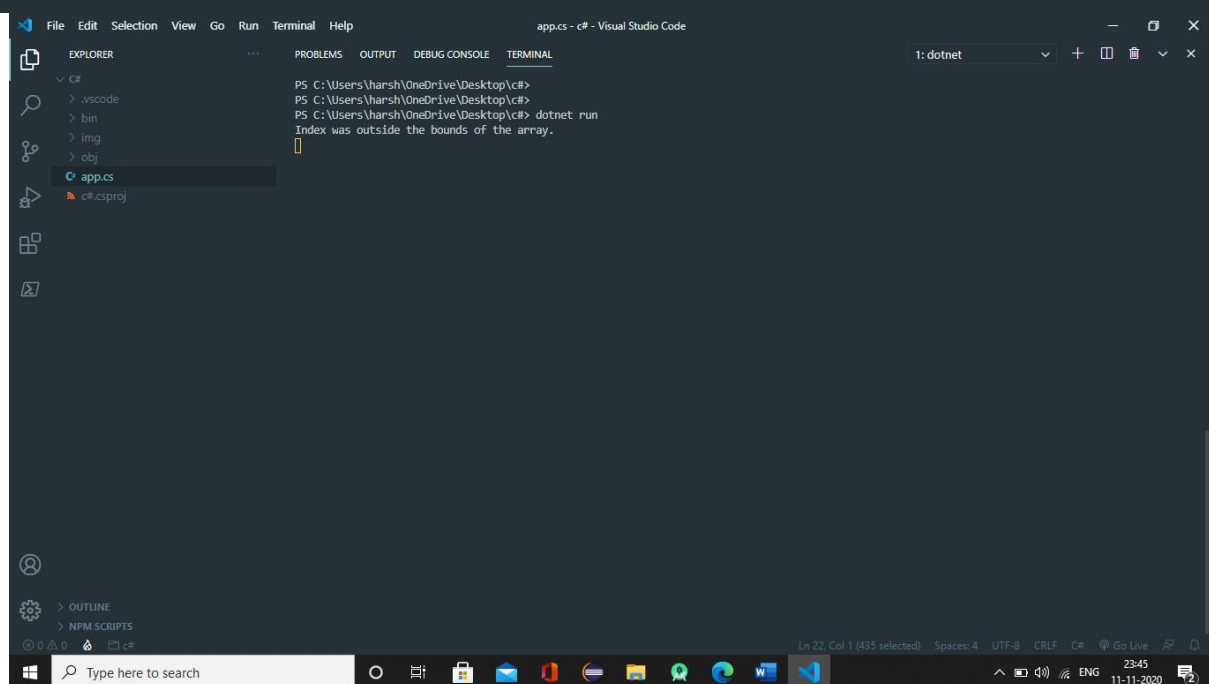

27. Write a program for exception handling through try and catch

```

using System;
namespace
TestConsoleApp{
class Program
{
    static void
Main(string[] args)
    {
        int[] myNumbers = {
1, 2, 3,4 };
        try
        {
            Console.WriteLine(myNumbers[5]);
        }
        catch (Exception c)
        {
            Console.WriteLine(c.Message);
            Console.ReadLine();
        }
    }
}
}

```

28. Write a program for Properties

```

using System;
namespace TestConsoleApp{
public class Properties
    {
        public class
CSharp
        {
            public int
roll;
            public string
name;
            private string
Result;

            public CSharp(int a, string b, string
c)
            {
roll = a;
name = b;

            Result1 = c;
            }
            public string
Result1
            {
                {
                    get
{
                        return
Result;
                    }
                    set
{
if (value == "good" || value == "average" || value == "bad
")
                {
                    Result = value;
                }
else
                {
                    Result = "Not Valid";
                }
            }
        }
    }
}

class Program
{
    static void
Main(string[] args)
    {
        Properties.CSharp c1 = new Properties.CSharp(1, "Xyz", "good");
        Properties.CSharp c2 = new Properties.CSharp(2, "Ijk", "5");
    }
}

```

```
        Console.WriteLine(c1.roll + " " + c1.name + " " + c1.Result1);
        Console.WriteLine(c2.roll + " " + c2.name + " " + c2.Result1);
        Console.ReadLine();
    }
}
```

29. Write a program for Constructors

```

using System;
namespace
TestConsoleApp{
class Constructor
    {
        public class
CSharp
        {
            public
int roll;
            public
string name;
public int marks;
            public CSharp(int a, string b, int
c)
        {
roll = a;
name = b;
marks = c;
        }
    }
}
public class MyClass
    {
        public static void
Main(string[] args)
        {
            Constructor.CSharp a = new Constructor.CSharp(10, "manish", 8);
Console.WriteLine("Roll: " + a.roll + "\nName: " + a.name + "\nMar ks: " +
a.marks);
            Console.ReadLine();
        }
    }
}

```

30. Write a program for Threading

```
using System;
using System.Threading;
namespace
TestConsoleApp{
class Program
    {
        static
void T1()
    {
        Console.WriteLine("Thread1 Started");
        Thread.Sleep(5000);
        Console.WriteLine("Thread1 executing");
        Thread.Sleep(5000);
        Console.WriteLine("Thread1 executing");
    }
    static void
T2()
    {
        Console.WriteLine("Thread2 Started");
        Thread.Sleep(5000);
        Console.WriteLine("Thread2 executing");
        Thread.Sleep(5000);
        Console.WriteLine("Thread2 executing");
    }
    public static void
Main()
    {
        Thread t1 = new
Thread(T1);          Thread t2 =
new Thread(T2);
        t1.Start();    t2.Start();
        Console.ReadLine();
    }
}
}
```

31. Write a program for Indexer

```
using System;
namespace
TestConsoleApp{
class IndexerCreation
{
    private string[] val = new
string[4];    public string this[int
index]
    {
        get
        {
return val[index];
        }
        set
        {
            val[index] =
value;
        }
    }
} class
MyClass
{
    public static void
Main()
    {
        IndexerCreation ic = new
IndexerCreation();
        ic[0] = "manish";
ic[1] = "vaibhav";    ic[2] = "kushagra";
ic[3] = "anishika";

        Console.Write("Printing values stored in objects used as arrays\n");
        Console.WriteLine(ic[0] + "\n" + ic[1] + "\n" + ic[2] + "\n" + ic[3]);
        Console.ReadLine();

    }
}
}
```

32. Write a program to access data from database using ADO.NET

```
using System;
namespace
TestConsoleApp{
class Program
    {
        public static void
Main(string[] args)
        {
            string connectionString;
MySQLConnection conn;
            connectionString = @"Data Source=localhost;Initial
Catalog=test;User ID=myuser;Password=password";
            conn = new
MySQLCo nnection(connectionString);
            conn.Open();
            Console.WriteLine("Connected to Database!");
            string
qu ery = "select * from student";
            MySqlCommand cmd = new MySqlCommand(query, conn);
            MySqlDataReader dataReader = cmd.ExecuteReader();
            Console.WriteLine(dataReader.GetName(0)+"
"+dataReader.GetName(1)+" "+dataReader.GetName(2));
while (dataReader.Read())
        {
            Console.WriteLine(dataReader.GetValue(0)+" "+
dataReader.GetValue(1)+" "+dataReader.GetValue(2));
        }
conn.Close();
    }
}
```

Connected to Database!

Roll	Name	Marks
------	------	-------

1824001	Abhijeet	7
